

Steps to configure SAP GUI in windows systems (download SAPGUI750.zip)

1. The installer SAPGUI750_6_2.exe can be used to install SAP GUI 750 in windows systems. After installation, the following steps are to be performed.
 2. Please copy the SAPUILandscape.xml file to the location ' %APPDATA%\sap\common '. This file may be overwritten if already existing in your system.
 3. Please copy the 'services' file to the location ' %WINDIR%\System32\drivers\etc '. The existing file should be overwritten.
- The above locations may be accessed through the run prompt (Press Windows key + R) and paste the location and click OK.

Steps to configure SAP GUI in Mac OS X - Apple Macbook (download SAPGUI_MAC.zip)

JDK should be installed as a prerequisite for installing SAP GUI for JAVA in Mac OS.

In case your system does not have JDK, please install the same using the file jdk-8u152-macosx-x64.dmg. Once JDK is installed proceed as follows.

1. Extract 50132986_7.ZIP and navigate to
50132986_7\BD_NW_7.0_Presentation_7.40_Comp._3_\PRES2\GUI\JAVA
2. Double click on PlatinGUI740MacOSX_7.JAR to install SAP GUI for JAVA.
3. After successful installation, copy the file SAPGUILandscape.xml to the location
<home directory>/Library/Preferences/SAP/
(hit Command+Shift+G from the Mac desktop (or Finder > Go > Go to Folder) and type in
~/Library/Preferences/SAP to temporarily access the Library directory in the Finder and replace the existing file)
4. Now launch the SAP GUI for JAVA from Launchpad

FAQs

1. What should I do to work on SAP from home?

First you need apply for VPN and get the same. Please contact VPN team for the same. Once you get VPN connection, you should install & configure SAP GUI in your laptop/desktop. After the configuration of SAP GUI, connect to VPN and you can start using SAP.

2. How do I install/configure SAP GUI on my laptop/desktop?

All the required files and instructions are available in the ESS notice board under "SAP GUI access through VPN" section. The same instructions are mentioned above.

Please note, once you complete all the steps mentioned above, SAP GUI will be ready to use, with shortcuts of ECC Production & SRM Production.

3. I am unable to configure it myself what should I do?

Please contact your respective local IT department. These steps are the same ones used to configure SAP logon pad in your office systems. Your IT department will be able to guide you.

4. I am able to see ECC production shortcut in SAP logon pad but when I try to login, I am getting a logon balancing error.

In windows systems, make sure you have copied the services file to
%WINDIR%\System32\drivers\etc.

If you are still getting the error, the issue is with your connection (VPN). Please contact your local IT/VPN team.
